

# Cutshort frontend assignment

## Objective of the assignment

To create a user onboarding flow based on [this mockup](#)

## The deliverables

1. A hosted page which demonstrates the onboarding screen with all the necessary interactions based on the mockup. You can use ngrok, netlify, heroku, etc
2. Code hosted on github or bitbucket. You must use ReactJS to make the project.

## Criteria the assignment will be evaluated on

1. How accurate your UI is to the design in the given mockup
2. How readable your code is
3. How you organize your codebase
4. Whether your code is extensible
5. How well your UI works across devices

## Things to keep in mind

1. You can take upto 3 days to complete the assignment. If you need more time, please let me know in the chat itself.
2. You can use "Inter" as the choice of font for this assignment
3. To use the same icons as given in the mockup, you can take a screenshot of the mockup and snip out the icons and then use them in your code.
4. If you have any questions or doubts around the assignment, you can always ask on the conversation thread on Cushort.

5. There is no need for any server side implementations. All variables / states can be kept static on the frontend itself.
